## Foreword

The Netherlands Scheme for Certification in the Area of IT Security (NSCIB) provides a third-party evaluation and certification service for determining the trustworthiness of Information Technology (IT) security products. Under this NSCIB, TrustCB B.V. has the task of issuing certificates for IT security products, as well as for protection profiles and sites.

Part of the procedure is the technical examination (evaluation) of the product, protection profile or site according to the Common Criteria assessment guidelines published by the NSCIB. Evaluations are performed by an IT Security Evaluation Facility (ITSEF) under the oversight of the NSCIB Certification Body, which is operated by TrustCB B.V. in cooperation with the Ministry of the Interior and Kingdom Relations.

An ITSEF in the Netherlands is a commercial facility that has been licensed by TrustCB B.V. to perform Common Criteria evaluations; a significant requirement for such a licence is accreditation to the requirements of ISO Standard 17025 “General requirements for the accreditation of calibration and testing laboratories”.

By awarding a Common Criteria certificate, TrustCB B.V. asserts that the product or site complies with the security requirements specified in the associated (site) security target, or that the protection profile (PP) complies with the requirements for PP evaluation specified in the Common Criteria for Information Security Evaluation. A (site) security target is a requirements specification document that defines the scope of the evaluation activities.

The consumer should review the (site) security target or protection profile, in addition to this certification report, to gain an understanding of any assumptions made during the evaluation, the IT product's intended environment, its security requirements, and the level of confidence (i.e., the evaluation assurance level) that the product or site satisfies the security requirements stated in the (site) security target.

Reproduction of this report is authorised only if the report is reproduced in its entirety.

## Recognition of the Certificate

At the time of publication, the Common Criteria Recognition Arrangement (CCRA) and the SOG-IS Mutual Recognition Agreement (SOG-IS MRA) do not cover the recognition of Site Certificates. The site-security evaluation process, however, followed all the rules of these agreements and used the agreed supporting document for site certification [CCDB]. Therefore, the results of this evaluation and certification procedure can be reused by any scheme in subsequent product evaluations and certification procedures that make use of the certified site.

Presence of the CCRA and SOG-IS logos on this certificate would indicate that the certificate is issued in accordance with the provisions of the CCRA and the SOG-IS MRA and is recognised by the participating nations. The CCRA and the SOG-IS MRA do not cover site certification, however, so these logos are not present on this certificate.

## 1 Executive Summary

This Certification Report states the outcome of the Common Criteria security evaluation of the ACT Dongguan Technology Limited. The sponsor of the evaluation and certification is Apply Card Technology Limited located in Kwai Chung N.T., Hong Kong, and the operator of the site is ACT Dongguan Technology Limited.

The evaluated site is: ACT Dongguan Technology Limited.

The site is used by ACT Dongguan Technology Limited to participate in the manufacturing and testing of inlays for secure IC hardware products. To perform its activities, the site uses the local IT equipment (workstations, servers, and networking) and works according to the ACT Dongguan Technology Limited defined processes. The site performs the following services:

- Manufacturing of inlays & IC modules
- Electrical Test of finished inlays & IC modules, such that ACTDG does not perform wafer testing, but electric test only. No security relevant test is provided in ACTDG.
- Destruction of defect inlays & IC modules

The site activities could be related to Phase 4 of the seven phases of the Lifecycle Model as defined in [PP].

The site has been evaluated by TÜV Informationstechnik GmbH located in Essen, Germany. The evaluation was completed on 24 July 2024 with the approval of the ETR. The certification procedure has been conducted in accordance with the provisions of the Netherlands Scheme for Certification in the Area of IT Security [NSCIB].

The scope of the evaluation is defined by the Site Security Target [SST], which identifies assumptions made during the evaluation and the level of confidence (evaluation assurance level) the site is intended to satisfy for product evaluations. Users of this site certification are advised to verify that their own use of, and interaction with, the site is consistent with the Site Security Target, and to give due consideration to the comments, observations and recommendations in this certification report.

The results documented in the Evaluation Technical Report [ETR]<sup>1</sup> and [STAR]<sup>2</sup> for this site provide sufficient evidence that this site meets the EAL6 assurance components ALC\_CMC.5, ALC\_CMS.5, ALC\_DVS.2 (at AVA\_VAN.5 level), and ALC\_LCD.1.

The evaluation was conducted using the Common Methodology for Information Technology Security Evaluation, Version 3.1 Revision 5 [CEM] and the Supporting Document Guidance: CCDB-2007-11-001 Site Certification, October 2007, Version 1.0, Revision 1 [CCDB], for conformance to the Common Criteria for Information Technology Security Evaluation, Version 3.1, Revision 5 [CC].

TrustCB B.V., as the NSCIB Certification Body, declares that the evaluation meets all the conditions of the Common Criteria and that the site certificate will be included on the NSCIB Certificates list. Note that the certification results apply only to the specific site, used in the manner defined in the [SST-Lite].

---

<sup>1</sup> The Evaluation Technical Report contains information proprietary to the developer and/or the evaluator, and is not available for public review.

<sup>2</sup> The Site Technical Audit Report contains information necessary to an evaluation lab and certification body for the reuse of the site audit report in a TOE evaluation.

## 2 Certification Results

### 2.1 Site Identification

The Target of Evaluation (TOE) for this evaluation is the ACT Dongguan Technology Limited located in Dongguan, China.

### 2.2 Scope: Physical

This site certification considers a single location occupied only by the ACT Dongguan Technology Limited, consisting of three different buildings, called Building A, Building B, and Building C. Only Building B is in the scope of this evaluation. Building B has a total of 3 levels. The 1/F is used for packaging, logistic, scrapping and warehouse function. 2/F is used for packaging and production for the secure products. The part of area in 3/F is used for IT facilities and server rooms. The border of the site is determined by the fence/gate all around the building.

The area where the relevant activities take place is limited to Building B:

- 1st Floor: logistic, scrapping and warehouse, IC chipset & wafer storage cleanroom function,
- 2nd Floor: production of the secure products,
- 3rd Floor: production of the secure products.
- 4th Floor: partially for the production of IC modules, and also partially used for the production of secure products

### 2.3 Scope: Logical

This site provides the following services:

- Manufacturing of inlays & IC modules
- Electrical Test of finished inlays & IC modules
- Destruction of defect inlays & IC modules

For smartcard products, these activities could be related to Phase 4 of the seven phases of the Lifecycle Model in [PP].

Within that phase, the site is involved in:

- ALC\_DVS to control access to the assets (at AVA\_VAN.5 level)
- ALC\_CMC/CMS to handle the site internal documentation and TOE development-related configuration items
- ALC\_LCD as part of TOE testing

This site does not have a direct role in ALC\_DEL or ALC\_TAT and therefore those activities in an associated TOE evaluation are not impacted by the operations of this site.

### 2.4 Evaluation Approach

The evaluation is a re-evaluation.

In the evaluation all evaluator actions, including a site visit, have been performed. The site audit was performed in-person. For assessment of the ALC\_DVS aspects, the Minimum Site Security Requirements [MSSR] have been used.

### 2.5 Evaluation Results

The evaluation lab documented its evaluation results in the [ETR]<sup>3</sup>, which references other evaluator documents. To support reuse of the site evaluation activities a derived document [STAR]<sup>4</sup> was

---

<sup>3</sup> The Evaluation Technical Report contains information proprietary to the developer and/or the evaluator, and is not available for public review.

provided and approved. This document provides details of the site evaluation that must be considered when this site is used in a product evaluation.

The evaluation lab concluded that the site meets the assurance requirements listed in the [SST] as assessed in accordance with [CC], [CEM] and [CCDB].

## **2.6 Comments/Recommendations**

The Site Security Target [SST] contains necessary information about the usage of the site. During a product evaluation, the evidence for fulfilment of the Assumptions listed in the [SST] shall be examined by the evaluator of the product when reusing the results of this site evaluation.

---

<sup>4</sup> The Site Technical Audit Report contains information necessary to an evaluation lab and certification body for the reuse of the site audit report in a TOE evaluation.

### 3 Site Security Target

The Site Security Target of ACT Dongguan Technology Limited, version 2.0, Date 2024-05-30 [SST] is included here by reference.

Please note that for the need of publication a public version [SST-lite] has been created and verified according to [ST-SAN].

### 4 Definitions

This list of acronyms and definitions contains elements that are not already defined by the CC or CEM:

IT	Information Technology
ITSEF	IT Security Evaluation Facility
JIL	Joint Interpretation Library
MSSR	Minimum Site Security Requirements
NSCIB	Netherlands Scheme for Certification in the area of IT Security
TOE	Target of Evaluation
