Foreword

TrustCB is a fully independent commercial Certification Body specialising in the provision of high-assurance, security certifications for ICT products and associated sites, processes and services.

TrustCB is widely recognised for its schemes and certification work referencing the Common Criteria (CC) and Common methodology (CEM) for Information Technology Security Evaluation. CC and CEM are published by ISO/IEC as ISO/IEC 15408, Evaluation criteria for IT security and ISO/IEC 18045 Methodology for IT security evaluation (CC).

Common Criteria based Site Certifications have long been recognised in demonstrating security in a product lifecycle. TrustCB has significant experience in the certification of sites referencing the SOG-IS recognised Netherlands Scheme for Certification in the Area of IT Security (NSCIB) scheme.

Since “site certification” is not explicitly defined in the EUCC Regulation, (EU) 2024/482, TrustCB has developed the TrustCB **Site Certification Scheme**. The scheme is in full alignment with EUCC requirements and State of the Art documents, and ready for recognition across cooperating schemes.

Importantly, the scheme is built on the NSCIB site-audit framework. Its principles are aligned with those adopted under the SOG-IS agreement and used by the SOG-IS based national schemes, now all superseded by EUCC. As such, the TrustCB Site Certification scheme ensures continuity with the recognised best practices used for STAR acceptance under SOGIS, as the ecosystem is now firmly transitioned to EUCC.

By awarding a TrustCB Site Certification Scheme certificate, TrustCB B.V. certifies that a site complies with the security requirements specified in the associated Site Security Target, in compliance the Common Criteria standards.

The consumer of this certification should review the Site Security Target (SST) in addition to this Certification Report, to gain an understanding of any assumptions made during the evaluation, and the level of confidence that the site satisfies the security requirements stated in the Site Security target.

Reproduction of this report is authorised only if the report is reproduced in its entirety.

Recognition of the Certificate

At the time of publication, the Common Criteria Recognition Arrangement (CCRA) does not cover the recognition of Site Certificates. The site-security evaluation process, however, followed all the rules of these agreements and used the agreed supporting document for site certification [CCDB]. Therefore, the results of this evaluation and certification procedure are available for use in any scheme in subsequent product evaluations and certification procedures that make use of the certified site.

The reuse of this certification with a third-party Certification Body should always be checked with the intended consuming Certification Body ahead of being reused.

1 Executive Summary

This Certification Report states the outcome of the Common Criteria security evaluation of the Sipi Metals Corporation. The sponsor of the evaluation and certification is NXP Semiconductors N.V. located in Hamburg, Germany and the operator of the site is Sipi Metals Corporation.

The evaluated site is: Sipi Metals Corporation.

The site is used by NXP Semiconductors N.V. to participate in the secure destruction of hardware/software for secure IC hardware products. To perform its activities, the site uses the Sipi Metals Corporation provided remote IT-infrastructure and local IT equipment (workstations, router, VPN) and works according to the Sipi Metals Corporation defined processes. The site performs secure destruction of scrap hardware/software which is generated during the development and production of secure IC hardware products. The site activities could be related to any or all of the seven phases of the Lifecycle Model as defined in [PP].

The site has been evaluated by SGS Brightsight B.V. located in Delft, The Netherlands. The evaluation was completed on 2026-09-02 with the approval of the ETR. The site audit was performed 2026-06-25.

The certification procedure has been conducted in accordance with the provisions of the TrustCB Site Certification Scheme [TrustCB-SP]

The scope of the evaluation is defined by the Site Security Target [SST], which identifies assumptions made during the evaluation and the level of confidence (evaluation assurance level) the site is intended to satisfy for product evaluations. Users of this site certification are advised to verify that their own use of, and interaction with, the site is consistent with the Site Security Target, and to give due consideration to the comments, observations and recommendations in this certification report.

The results documented in the Evaluation Technical Report [ETR]¹ and [STAR]² for this site provide sufficient evidence that this site meets the EAL6 assurance components ALC_DVS.2 (at AVA_VAN.5 level) and ALC_LCD.1.

The evaluation was conducted using the Common Methodology for Information Technology Security Evaluation, CEM:2022 [CEM] and the Supporting Document Guidance: CCDB-2007-11-001 Site Certification, October 2007, Version 1.0, Revision 1 [CCDB], for conformance to the Common Criteria for Information Technology Security Evaluation, CC:2022 [CC].

TrustCB B.V., as Certification Body for this site certification activity, declares that the evaluation meets all the conditions of the Common Criteria and that the site certificate will be included on the TrustCB webpage of certified sites.

Note that the certification results apply only to the specific site, used in the manner defined in the [SST].

¹ The Evaluation Technical Report contains information proprietary to the developer and/or the evaluator, and is not available for public review.

² The Site Technical Audit Report contains information necessary to an evaluation lab and certification body for the reuse of the site audit report in a TOE evaluation.

2 Certification Results

2.1 Site Identification

The Target of Evaluation (TOE) for this evaluation is the Sipi Metals Corporation located in Chicago, Illinois, USA.

2.2 Scope: Physical

This site certification considers a single building location occupied only by Sipi Metals Corporation.

The area where the relevant activities take place is limited to:

- Courier vehicle route
- Unloading area
- Scale (receiving office)
- Secure storage cage
- Foundry area (furnaces)

2.3 Scope: Logical

This site is used for secure destruction of hardware/software related to development and production of secure integrated circuits. Assets are securely stored before being securely destroyed in furnaces.

For smartcard products, these activities could be related to any or all of the seven phases of the Lifecycle Model in [PP].

Within those phases, the site is involved in:

- ALC_DVS to control access to the assets (at AVA_VAN.5 level)
- ALC_LCD as part of TOE development and production

This site does not have a direct role in ALC_CMC, ALC_CMS, and ALC_TAT and therefore those activities in an associated TOE evaluation are not impacted by the operations of this site.

2.4 Evaluation Approach

The evaluation is a re-evaluation, based on developer documentation of a minor site change.

In the evaluation all evaluator actions, including an in-person site visit, have been performed. For assessment of the ALC_DVS aspects, the Minimum Site Security Requirements [MSSR] have been used.

2.5 Evaluation Results

The evaluation lab documented its evaluation results in the [ETR]³, which references other evaluator documents. To support reuse of the site evaluation activities a derived document [STAR]⁴ was provided and approved. This document provides details of the site evaluation that must be considered when this site is used in a product evaluation.

The evaluation lab concluded that the site meets the assurance requirements listed in the [SST] as assessed in accordance with [CC], [CEM] and [CCDB].

³ The Evaluation Technical Report contains information proprietary to the developer and/or the evaluator, and is not available for public review.

⁴ The Site Technical Audit Report contains information necessary to an evaluation lab and certification body for the reuse of the site audit report in a TOE evaluation.

2.6 Comments/Recommendations

The Site Security Target [SST] contains necessary information about the usage of the site. During a product evaluation, the evidence for fulfilment of the Assumptions listed in the [SST] shall be examined by the evaluator of the product when reusing the results of this site evaluation.

3 Site Security Target

The Sipi Chicago - Site Security Target, NXPOMS-1719007347-16618, v1.7, 16 March 2026 [SST] is included here by reference.

4 Definitions

This list of acronyms and definitions contains elements that are not already defined by the CC or CEM:

IT	Information Technology
ITSEF	IT Security Evaluation Facility
JIL	Joint Interpretation Library
MSSR	Minimum Site Security Requirements
SST	Site Security Target
TOE	Target of Evaluation
